DETAILED ACTION

Claims 1-7 are pending.

Claim Objections

Claim 3 is objected to because of the following informalities: The claim recites "comprising the steps of: 1) reacting the phenyl pyridine compound of formula (1)...".

The phenyl pyridine in the claim is given by formula (2). Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 1 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for R1 or R2 or R3 taken together to form a cycloalkyl ring, and R1, R2 and R3 being an alkyl group, does not reasonably provide enablement for a heterocyclic aromatic group with 5-18 carbon atoms with one or more hetero atoms selected from N,O and S. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. In re Wands, 858 F.2d 731, 737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988).

There are many factors to be considered when determining whether there is sufficient evidence to support a determination that a disclosure does not satisfy the enablement requirement and whether any necessary experimentation is "undue". These factors include

1) the breadth of the claims,

2) the nature of the invention,

3) the state of the prior art,

4) the level of one of ordinary skill,

5) the level of predictability in the art,

6) the amount of direction provided by the inventor,

7) the existence of working examples, and

8) the quantity of experimentation needed to make or use the invention based on the

content of the disclosure.

The unclear definition of the hetero groups, and no direction provided by the inventor

without any working examples requires an undue amount of experimentation to practice the

invention.

The general terms of having a hetero atom selected from NO or S gives rise to

numerous permutations and combinations of hetero groups.

Claim1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the

written description requirement. The claim(s) contains subject matter which was not described

in the specification in such a way as to reasonably convey to one skilled in the relevant art that

the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claim reciting wherein R1, R2, R3 is a hetero cyclic group containing N, O or S or two or

more R1, R2 or R3 combining to give a hetero ring.. There are no examples nor is there any

description or definition of what these group are.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim recites reacting the precursor compound obtained by the steps above, but it is not clear what that precursor compound really is.

Applicant can over come this by including the precursor in the claim.

Conclusion

The claims 1-7 are not found to be allowable.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rita J. Desai whose telephone number is 571-272-0684. The examiner can normally be reached on Monday - Friday,9:30 am to 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cecilia Tsang can be reached on 571-272-0562. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
